Name of Learner: **PYP 4** **Time Period: 27 March –1 April**

Subject Focus: Mathematics **MHLE - 31**

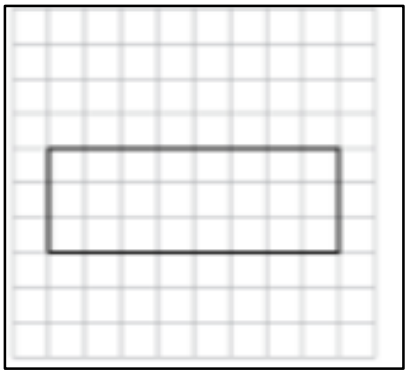

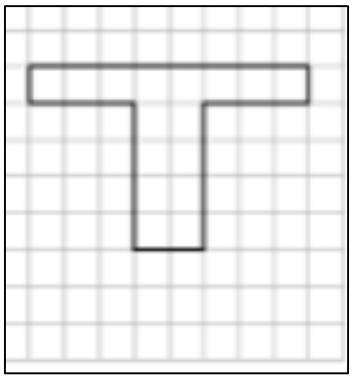

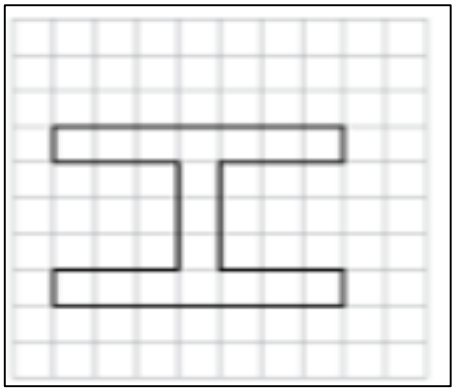

Purpose: To apply the conceptual understanding of measurement.

Learning Outcome: Learners

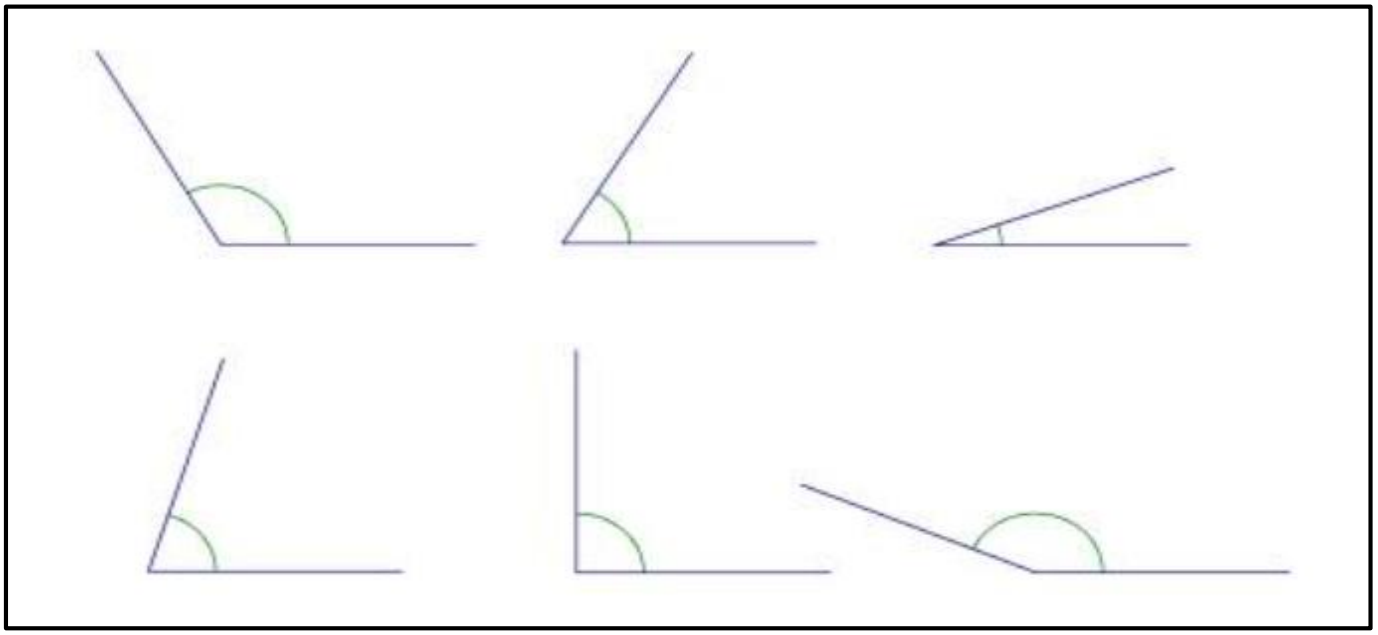

- apply formulas to find the area and perimeter of squares and rectangles.
- measure angles using a protractor.

Must Do

Task 1: Find the area and perimeter of the given shapes in each grid.

		
Perimeter = Area =	Perimeter = Area =	Perimeter= Area =

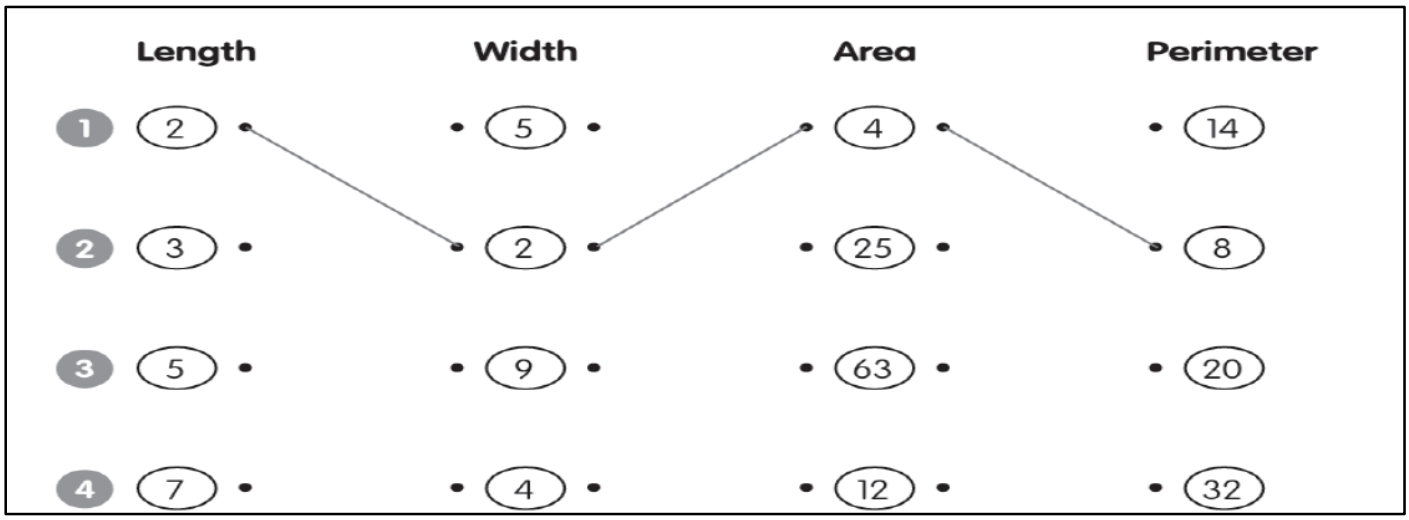

Task 2: Measure the given angles using protractor and name the type of angle (acute/right/obtuse angled).

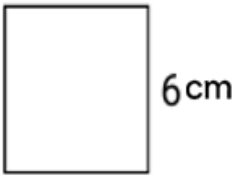

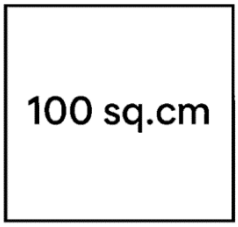

Credits: Team PYP 4 Resources: Math in Focus, https://math-drills.com/

Could do:

Task 3: Match the length and width to the area and perimeter of each shape. The first one has been done for you.

Task 4: Find the area and perimeter of the given squares with the following dimensions.

a)Side =6cm Perimeter = cm Area = sq.cm 	b)Find the side and perimeter of a square if its area is 100 sq.cm. Side = cm. Perimeter = cm. 

Enrichment Task: Relationship of area and perimeter.

Draw a square with the same area and perimeter. Label the sides.
